COSA Assignment 7

Q1 - Once Windows Server with DNS role installed then add One or two client machines (Windows 10/11) for testing.

- You are the administrator & setup a domain as "hackaday.ai"
- Create the corresponding Reverse Lookup Zone (PTR zone)
- Tasks: hackaday.ai has the following services running on internal servers:

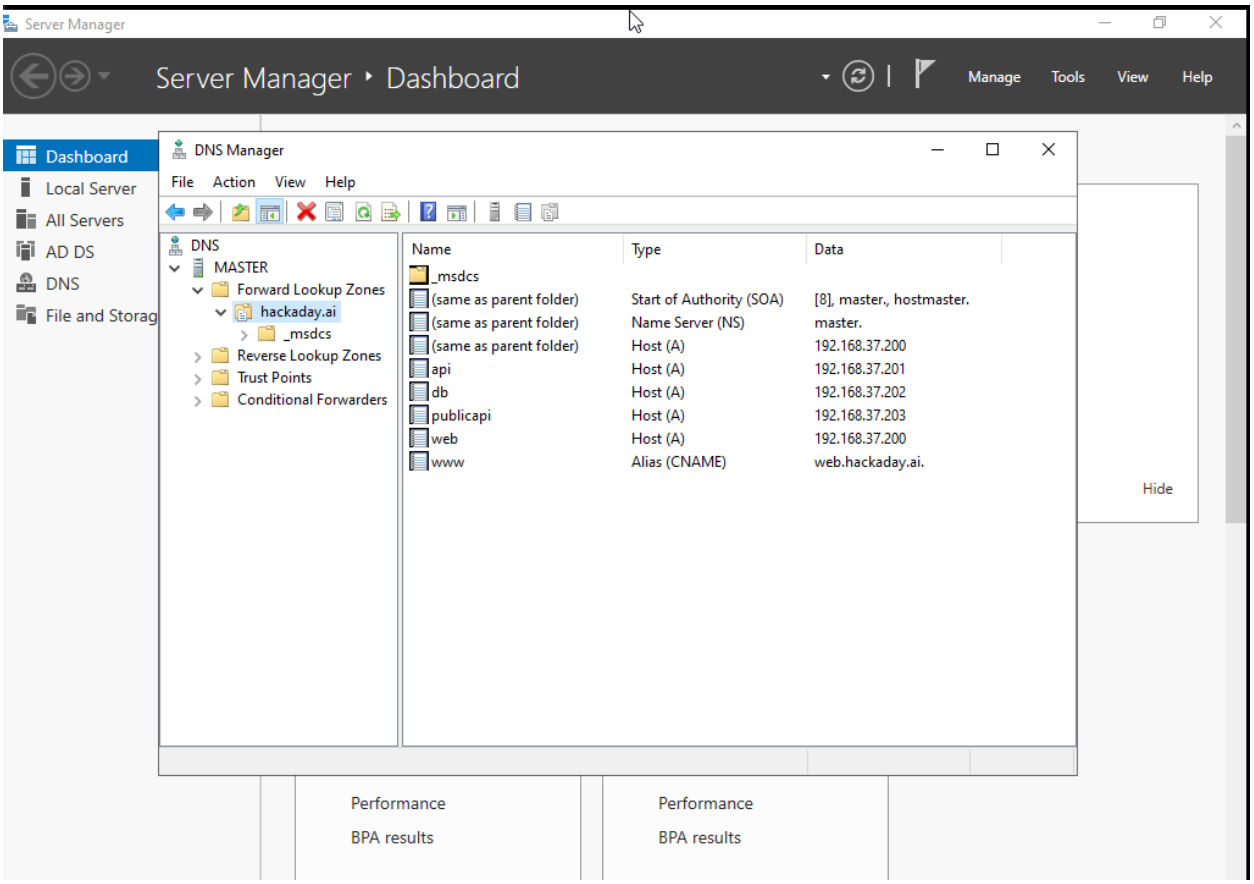

web.hackaday.ai → Main company website (hosted on web server)

www.hackaday.ai → Alias for the main website

api.hackaday.ai → Public REST API

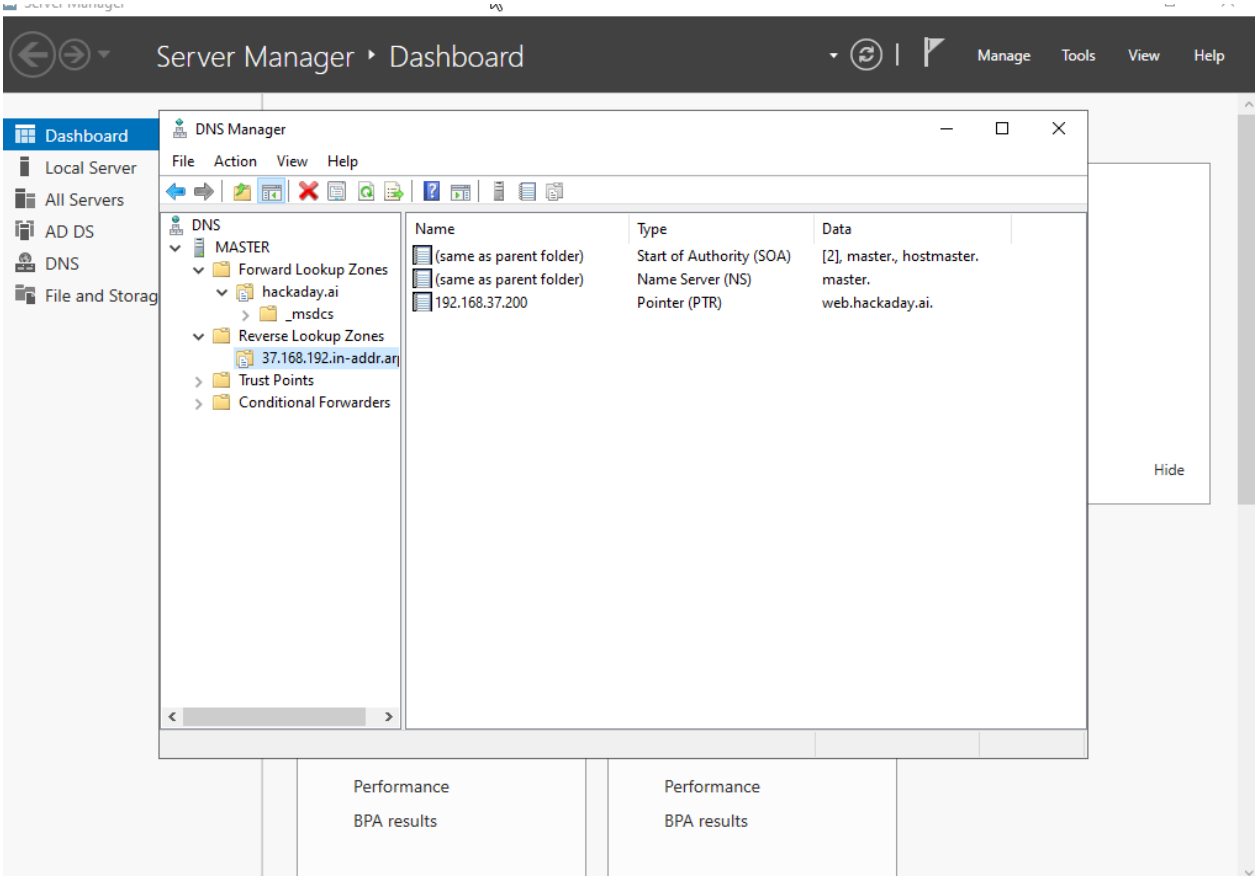

db.hackaday.ai → Internal database server (for admin access)

Forward Zone –

COSA Assignment 7

Reverse Zone –

Verification (from client):

nslookup hackaday.ai → 192.168.X.200

nslookup web.hackaday.ai → 192.168.X.200

nslookup api.hackaday.ai → 192.168.X.201

COSA Assignment 7

nslookup db.hackaday.ai → 192.168.X.202

nslookup publicapi.hackaday.ai → 192.168.X.203

nslookup www.hackaday.ai → resolves to web.hackaday.ai and 192.168.X.200

nslookup 192.168.10.200 → web.hackaday.ai
